

It isn't uncommon for an inspector to want to remove one individual section of the report from line numbering, usually a custom work order or contract form. However in the inspector program itself you can only turn numbering on or off. This is enough for most inspectors, but if you need that extra level of customization then the inspection designer program is for you. This step-by-step guide will show you how to remove individual sections, down to the individual line, from line numbering.

Using inspection designer to remove line numbering

1. Open your template using the inspection designer program.
2. Select the category in which you'd like to remove numbering.
3. In the upper portion of the screen, locate your line(s) that you want to remove numbering from.
4. Click the green dot next to the line, this will open the line properties window.
5. Click on 'Advanced' and uncheck 'Include in line numbering'.

6. This process can be repeated to remove any lines from the report numbering that you would like. You have successfully removed items from line numbering.
